## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-14 are draw to the performance of the receiver based on bit error rate, the predetermined attenuation, and the receiving power, classified in class 455, subclass 423.
  - II. Claims 15-17 are draw to a receiver test arrangement of attenuator and programmable controller for initiating communication link via mobile station and remote station, classified in class 455, subclass 67.14.
2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the invention I is concerned with the performance of the receiver based on bit error rate, the predetermined attenuation, and the receiving power. The subcombination has separate utility such as the invention II in which it is concerned with a receiver test arrangement of attenuator and programmable controller for initiating communication link via mobile station and remote station.

Art Unit: 2618

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
